Why

Toward a theory of iterated integrals, we need to know the function measuring a section is integrable.

Results

Prop. 1. *Let $(X, \mathcal{A}, \mu)$ and $(Y, \mathcal{B}, \nu)$ be sigma-finite measurable spaces. Let $E \in \mathcal{A} \times \mathcal{B}$. The function $x \mapsto \nu(E_x)$ is $\mathcal{A}$-measurable and the function $y \mapsto \mu(E^y)$ is $\mathcal{B}$-measurable.*
