Why

We want to add real numbers.[1]

Definition

The *real sum* of two real numbers R and S is the set

$$\{t \in \mathbf{Q} \mid \exists r \in R, s \in S \text{ with } t = r + s\}.$$

Notation

We denote the sum of two real numbers x and y by $x + y$.

Properties

We can show the following.[2]

Proposition 1 (Associative)**.** $x + (y + z) = (x + y) + z$

Proposition 2 (Commutative)**.** $x + y = y + x$

Proposition 3 (Identity)**.** *The set of negative rational numbers is the additive identity.*

We denote the additive identity of $\mathbf{R}$ under $+$ by $0_{\mathbf{R}}$. When it is clear from context, we call $0_{\mathbf{R}}$ "zero".
