Why

Consider two convergent sequences. What if we add them termwise? Or multiply?

Main results

Proposition 1. *Let* $(x_n)_{n\in\mathbf{N}}$ *and* $(y_n)_{n\in\mathbf{N}}$ *be two limits with* x_0 *and* y_0 *in* $\mathbf{R}$. *Then the sequence* (s_n) *defined by* $s_n = x_n + y_n$ *converges to the limit* $x_0 + y_0$ *and the sequence* $m_n = x_n y_n$ *converges to the limit* $x_0 y_0$.[1]

In particular for $a \in \mathbf{R}$, the sequence (c_n) defined by $c_n = ax_n$ converges to the limit ax_0.

[1] Future editions will include the account.
