

## Why

If we have a norm, then we have a metric.

## Motivating result

**Proposition 1.** *Let  $(V, F)$  be a vector space. Let  $f : V \rightarrow \mathbf{R}$  be a norm. Let  $g : V \times V \rightarrow \mathbf{R}$  such that*

$$g(x, y) = \|x - y\|.$$

*Then  $g$  is a metric.*<sup>1</sup>
