

# Sets

## 1 Why

We want to talk about none, one, or several objects considered as a whole, for which we will use the word *set*.

## 2 Definition

A **set** is an abstract object which we think of as several objects considered at once. We say that the set **contains** the objects so considered. We call these the **elements** of the set.

We call the set which contains no objects the **empty set**. We call a set which contains only a single object a **singleton**. A singleton is not the same as the object it contains. Besides these two cases, we think of sets as containing two or more objects.

The objects a set contains may be other sets. This may be subtle at first glance, but becomes familiar with experience.

## 2.1 Notation

Let us tend to denote sets by upper case Latin letters: for example,  $A$ ,  $B$ , and  $C$ . To aid our memory, let us tend to use the lower case form of the letter for an element of the set. For example, let  $A$  and  $B$  be non-empty sets. Let us tend to denote by  $a$  an element of  $A$ , and likewise, by  $b$  an element of  $B$ .

Let us denote that an object  $a$  is an element of a set  $A$  by  $a \in A$ . We read the notation  $a \in A$  aloud as “a in A.” The  $\in$  is a stylized lower case Greek letter:  $\epsilon$ . It is read aloud “ehp-sih-lawn” and is a mnemonic for “element of”. We write  $a \notin A$ , read aloud as “a not in A,” if  $a$  is not an element of  $A$ .

If we have named the elements of a set, and can list them, let us do so between braces. For example, let  $a$ ,  $b$ , and  $c$  be three distinct objects. Denote by  $\{a, b, c\}$  the set containing these three objects and only these three objects. We can further compress notation, and denote this set of three objects by  $A$ : so,  $A = \{a, b, c\}$ . Then  $a \in A$ ,  $b \in A$ , and  $c \in A$ . Moreover, if  $d$  is an object and  $d \in A$ , then  $d = a$  or  $d = b$  or  $d = c$ .

We denote the empty set by  $\emptyset$ . Note that  $\emptyset \neq \{\emptyset\}$ . The left hand side,  $\emptyset$ , is the empty set. The right hand side,  $\{\emptyset\}$ , is the singleton whose element is the empty set. We distinguish the set containing one element from the element itself.
