

Direct Products

1 Why

We can profitably generalize the notion of cartesian product to families of sets indexed by the natural numbers.

2 Direct Products

The **direct product** of family indexed by a subset of the naturals is the set whose elements are ordered sequences of elements from each set in the family. The ordering on the sequences comes from the natural ordering on N . If the index set is finite, we call the elements of the direct product **n -tuples**. If the index set is the natural numbers, and every set in the family is the same set A , we call the elements of the direct product the **sequences** in A .

2.1 Notation

For a family $\{A_\alpha\}_{\alpha \in I}$ of S with $I = \{1, \dots, n\}$, we denote the direct product by

$$\prod_{i=1}^n A_i.$$

We read this notation as "product over alpha in I of A sub-alpha." We denote an element of $\prod_{i=1}^n A_i$ by (a_1, a_2, \dots, a_n) with the understanding that $a_1 \in A_1, a_2 \in A_2, \dots, a_n \in A_n$.

If I is the set of natural numbers we denote the direct product by

$$\prod_{i=1}^{\infty} A_i.$$

We denote an element of $\prod_{i=1}^{\infty} A_i$ by (a_i) with the understanding that $a_i \in A_i$ for all $i = 1, 2, 3, \dots$. If $A_i = A$ for all $i = 1, 2, 3, \dots$, then (a_i) is a sequence in A .
