

POSITIVE DEFINITE MATRICES

Why

Definition

A matrix A is *positive definite* if all its quadratic forms are positive.

Notation

Let $A \in \mathbf{R}^{n \times n}$. A is positive definite if for every $x \in \mathbf{R}^d$,

$$x^T A x > 0.$$

We denote the set of real-valued positive definite d by d matrices by \mathbf{S}_{++}^d .
