

Why

Consider two convergent sequences. What if we add them termwise? Or multiply?

Main results

Proposition 1. *Let $(x_n)_{n \in \mathbf{N}}$ and $(y_n)_{n \in \mathbf{N}}$ be two limits with x_0 and y_0 in \mathbf{R} . Then the sequence (s_n) defined by $s_n = x_n + y_n$ converges to the limit $x_0 + y_0$ and the sequence $m_n = x_n y_n$ converges to the limit $x_0 y_0$.¹*

In particular for $a \in \mathbf{R}$, the sequence (c_n) defined by $c_n = ax_n$ converges to the limit ax_0 .
