

## STANDARDIZED ACCOUNTS

### Why

We want to do our best to have only one way to write accounts.

### Discussion

Consider the account.

#### Account 1. First Example

|   |  |      |         |        |
|---|--|------|---------|--------|
| 1 |  | name | $a$     |        |
| 2 |  | name | $b$     |        |
| 3 |  | have | $a = b$ |        |
| 4 |  | name | $c$     |        |
| 5 |  | have | $c = b$ |        |
| 6 |  | thus | $a = c$ | by 4,5 |

We standardize it:

#### Account 2. First Example

|     |  |      |           |         |
|-----|--|------|-----------|---------|
| 1-3 |  | name | $a, b, c$ |         |
| 4   |  | have | $a = b$   |         |
| 5   |  | have | $c = b$   |         |
| 6   |  | thus | $a = c$   | by 4,?? |
