

NATURAL INTEGER ISOMORPHISM

Why

Do the natural numbers correspond (in the sense *Isomorphisms*) to elements of integers.

Main Result

Indeed, the natural numbers correspond to the Z_+ .

Proposition 1. $(\mathbf{Z}_+, + \mid Z_+)$ and $(\omega, +)$ are isomorphic.

Proof. The function is $f(n) = [(n, 0)]$.¹ □

¹The full account will appear in future editions.
