

# Equations

## 1 Why

If we know the result of two operations

## 2 Definition

An **equation** is a sentence with an equality.

For example, if we have an object  $a$  and an object  $b$ , then an equation is

$$a = b.$$

Equations are useful when we do not know the particular identity of an object, but only that it belongs to some set. In this case, we call the equation **indeterminate**
