Affine Mmse Predictors

We want to find A and b to minimize

$$\mathbf{E}\,|Ax+b-y|^2.$$

Proof. We can express $\mathbf{E}(|Ax+b-y|^2)$ as $\mathbf{E}((Ax+b-y)^\top(Ax+b-y))$

$$\begin{array}{cccccc}
+ & \mathbf{tr}(A\,\mathbf{E}(xx^\top)A^\top) & + & \mathbf{E}(x)^\top A^\top b & - & \mathbf{tr}(A^\top\,\mathbf{E}(yx^\top)) \\
+ & b^\top A\,\mathbf{E}(x) & + & b^\top b & - & b^\top\,\mathbf{E}(y) \\
- & \mathbf{tr}(A\,\mathbf{E}(xy^\top)) & - & \mathbf{E}(y)^\top b & + & \mathbf{E}(yy^\top)
\end{array}$$

The gradients with respect to b are

$$\begin{array}{cccccc}
+ & 0 & + & A\,\mathbf{E}(x) & - & 0 \\
+ & A\,\mathbf{E}(x) & + & 2b & - & \mathbf{E}(y) \\
- & 0 & - & \mathbf{E}(y) & + & 0
\end{array}$$

so $2A\,\mathbf{E}(x)+2b-2\,\mathbf{E}(y)$. The gradients with respect to A are

$$\begin{array}{cccccc}
+ & \mathbf{E}(xx^\top)A^\top+\mathbf{E}(xx^\top)^\top A^\top & + & \mathbf{E}(x)b^\top & - & \mathbf{E}(yx^\top)^\top \\
+ & \mathbf{E}(x)b^\top & + & 0 & - & 0 \\
- & \mathbf{E}(xy^\top) & - & 0 & + & 0
\end{array}$$

so $2\,\mathbf{E}(xx^\top)A^\top+2\,\mathbf{E}(x)b^\top-2\,\mathbf{E}(xy^\top)$. We want A and b solutions to

$$\begin{aligned}
A\,\mathbf{E}(x)+b-\mathbf{E}(y) &= 0 \\
\mathbf{E}(xx^\top)A^\top+\mathbf{E}(x)b^\top-\mathbf{E}(xy^\top) &= 0
\end{aligned}$$

so first get $b=\mathbf{E}(y)-A\,\mathbf{E}(x)$. Then express

$$\begin{aligned}
\mathbf{E}(xx^\top)A^\top+\mathbf{E}(x)(\mathbf{E}(y)-A\,\mathbf{E}(x))^\top-\mathbf{E}(xy^\top) &= 0. \\
\mathbf{E}(xx^\top)A^\top+\mathbf{E}(x)\,\mathbf{E}(y)^\top-\mathbf{E}(x)\,\mathbf{E}(x)^\top A^\top-\mathbf{cov}(x,y) &= 0. \\
(\mathbf{cov}(x)-\mathbf{E}(x)\,\mathbf{E}(x)^\top)A^\top &= \mathbf{cov}(x,y)-\mathbf{E}(x)\,\mathbf{E}(y)^\top.
\end{aligned}$$
