

SUBMODULAR FUNCTIONS

Why

1

Definition

Let X a finite nonempty set. A function $f: \mathcal{P}(X) \to \mathbf{R}$ is submodular if

$$f(S \cup T) + f(S \cap T) \le f(S) + f(T)$$

for all $S, T \subset X$.

 $^{^1{\}rm Future}$ editions will include. The discussion will likely be genetic, through combinatorial optimization.
