

## MATRIX DETERMINANT OF PRODUCT

## Why

TODO

## Result

Proposition 1. The determinant of a product of two real matrices is the product of the determinant of each matrix.

*Proof.* Let  $A \in \mathbb{R}^{n \times p}$  and  $B \in \mathbb{R}^{p \times n}$ . We want to show that

$$\det(AB) = \det(A)\det(B).$$
