

Split Graphs

1 Why

They are chordal.

2 Definition

A *split graph* is an undirected graph whose vertices can be partitioned into two sets such that one set induces a complete subgraph and the other set has no edges between vertices.

3 Properties

Proposition 1. The complement of a split graph is a split graph.

Proposition 2. A graph is a split graph if and only if it is chordal and has a chordal complement.

Proof. TODO
