

## DIFFERENTIAL MUTUAL INFORMATION

## **Definition**

The differential mutual information between i and jth components of a multivariate density is the differential relative entropy of the i,jth marginal density with the product of the ith and jth marginal densities.

## **Notation**

Let  $f: \mathbf{R}^d \to \mathbf{R}$ . Let d denote the differential relative entropy. The mutual information between i and j for i, j = 1, ..., d and  $i \neq j$  is

$$d(f_{ij}, f_i f_j)$$
