

## CONVEX SETS AND HALFSPACES

Why

## Main Result

**Corollary 1.** Let  $(b_i)_{i\in I}$  be a family in  $\mathbb{R}^n$  and  $(\beta_i)_{i\in I}$  be a family in  $\mathbb{R}$ . The set

$$\{x \in \mathbf{R}^n \mid \langle x \rangle b_i \le \beta_i \text{ for all } i \in I\}$$

is convex.

A *polyhedral* convex set is one which can be expressed as the intersection of a finite family of closed halfspaces.
