

RANDOM VARIABLE MOMENTS

Why

1

Results

If the integral of the nth power of a real-valued random variable exists, the nth moment of the random variable is the expectation of its nth power.

Notation

Let $(X, \mathcal{A}, \mathbf{P})$ be a probability space. Let x be a real-valued random variable on X such that $\int x^n d\mathbf{P}$ exists. The nth moment of f is $\mathbf{E}(f^n)$.
