

#### RATIONAL ARITHMETIC

# Why

What are addition and multiplication for rationals? What are the identity elements?

### Definition

We call the operation of forming rationals sums rational addition. We call the operation of forming rational products rational multiplication.

## Results

It is easy to see the following.<sup>1</sup>

**Proposition 1.** The additive identity for Q is  $[(0_Z, 1_Z)]$ .

**Proposition 2.** The multiplicative identity for Z is  $[(1_Z, 1_Z)]$ .

# **Notation**

We denote the additive identity of  $\mathbf{Q}$  by  $0_{\mathbf{Q}}$  and the multiplicative identity by  $1_{\mathbf{Q}}$ . We denote the set  $\{q \in \mathbf{Q} \mid q \geq 0_Q\}$  by  $\mathbf{Q}_+$ .

## Distributive

**Proposition 3.** For rationals  $x, y, z \in \mathbb{Z}$ ,  $x \cdot (y + z) = x \cdot y + x \cdot z$ .
