

## RATIONAL REAL HOMOMORPHISM

## Why

Do the rational numbers correspond (in the sense Homomorphisms) to elements of the reals.

## Main Result

Indeed, roughly speaking the rationals correspond to elements of the reals which are bounded above by that rational. Denote by  $\tilde{\mathbf{R}}$  the set  $\{q \in \mathbf{R} \mid \exists s \in \mathbf{Q}, q = \{t \in \mathbf{Q} \mid t < s\}\}.$ 

**Proposition 1.** The fields  $(\tilde{R}, +_{R} | \tilde{R}, \cdot_{R} | \tilde{R})$  and  $(Q, +_{Q}, \cdot_{Q})$  are homomorphic.<sup>1</sup>

*Proof.* The function is 
$$f: \mathbf{Q} \to \mathbf{R}$$
 with  $f(q) = \{(r \in \mathbf{Q} \mid r < q\}$ 

<sup>&</sup>lt;sup>1</sup>Indeed, more is true and will be included in future editions. There is an *order perserving* field homomorphism.
