

## **SUBMATRICES**

## **Definition**

An index set of  $\{1, 2, ..., n\}$  is a subset of  $\{1, 2, ..., n\}$ . A submatrix of an  $m \times n$  matrix is a matrix whose are selected according to (TODO) an index set of  $\{1, 2, ..., m\}$  and index set of  $\{1, 2, ..., n\}$ ; we call the first index set the row index set and the second index set the column index set. A principal submatrix is the submatrix selected when the row and column index sets are identical.

A sequential partition of  $\{1, 2, ..., n\}$  is a sequence of index sets such that all elements of a later piece of the partition are larger (in the natural order) than all elements in all previous pieces.
