

INTERVAL LENGTH

Why

Toward defining the length of a subset of real numbers, we start by defining the length of an interval.

Definition

The *length* of an interval is the difference of its endpoints: the larger less the smaller.

Notation

Let a, b be real numbers which satisfy the relation a < b. The length of (a, b), [a, b] [a, b) and (a, b] is, in each case, b - a.

For example, the length of the interval (0,1) is 1.
