

GENERATED SIGMA ALGEBRAS

Why

A simple way to obtain a sigma algebra, is to start with some sets, and then to add all the sets needed to make the starting set closed under the various operations.

Definition

The generated sigma algebra for a set of subsets is the smallest sigma algebra containing the set of subsets. We must prove the existence and uniqueness of this sigma algebra.

Proposition 1. The intersection of a non-empty set of sigma algebras over the same set is a sigma algebra.

Proof. Given a family of sigma algebras $\{(A, \mathcal{A}_{\alpha}\}_{{\alpha} \in I} \text{ over some set, define } \mathcal{A} = \bigcap_{{\alpha} \in I} \mathcal{A}_{\alpha}.$

- 1. For all $\alpha \in I$, $A \in \mathcal{A}_{\alpha}$, thus $A \in \mathcal{A}$; condition (a).
- 2. For all $B \in \mathcal{A}$, for all $\alpha \in I$, $B \in \mathcal{A}_{\alpha}$. Thus, for all $\alpha \in I$, $C_A(B) \in \mathcal{A}_{\alpha}$. And so $C_A(B) \in \mathcal{A}$; condition (b).
- 3. For all sequences $\{B_n\} \subset \mathcal{A}$, $\{B_n\} \subset \mathcal{A}_{\alpha}$ for all α . Thus $\cup_n B_n \in \mathcal{A}_{\alpha}$ for all α and so $\cup_n B_n \in \mathcal{A}$; condition (c).

On the other hand, the union of a set of sigma algebras can fail to be a sigma algebra.

Proposition 2. If A is a set and $A \subset 2^A$, then there is a unique a smallest sigma algebra containing A.

Proof. We know of one sigma algebra containing \mathcal{A} : the power set of A. Thus, the set of sigma algebras containing \mathcal{A} is not empty. Proposition 1 implies the intersection of all such sigma algebras (containing \mathcal{A}) is a sigma algebra. The intersection contains \mathcal{A} , and is contained in all other sigma algebras with this property, so is a smallest sigma algebra containing \mathcal{A} . If \mathcal{B}, \mathcal{C} were two smallest sigma algebras, then $\mathcal{B} \subset \mathcal{C}$ and $\mathcal{C} \subset \mathcal{B}$, but then $\mathcal{B} = \mathcal{C}$; thus the smallest sigma algebra is unique. \square

Notation

Let A be a set and $A \subset \mathcal{P}(A)$. We denote the sigma algebra generated by A by $\sigma(A)$.
