

LINEAR REPRESENTATIONS OF GROUPS

Definition

Suppose G is a finite group with identity 1 and suppose V is a vector space over the field ${\bf C}$ of complex numbers. A linear representation $\rho:G\to GL(V)$ of G in V is a group homomorphism from G to the general linear group GL(V). Given ρ , we call V a representation space (or representation) of G

Suppose V has finite dimension n. In this case, we call n the degree of the representation ρ . Given a basis e_1, \ldots, e_n of V,
