

## NORM METRICS

## Why

If we have a norm, then we have a metric.

## Motivating result

**Proposition 1.** Let (V, F) be a vector space. Let  $f: V \to \mathbf{R}$  be a norm. Let  $g: V \times V \to \mathbf{R}$  such that

$$g(x,y) = ||x - y||.$$

Then g is a metric.<sup>1</sup>
