

## MATRIX PERMANENTS

## Why

1

## Definition

The permanent of a matrix  $A \in \mathbf{R}^{n \times m}$  is

$$\sum_{\sigma \in S_n} \prod_{i=1}^n A_{i,\sigma(i)}$$

where  $S_n$  is the symmetric group of degree n (see Permutations).

## Notation

We denote the permanent of A by perm(A).

 $<sup>^1{</sup>m Future}$  editions will include. The reasoning is that several counting problems to do with graphs reduce to permanents of the adjacency matrix.
