

RIGHT TRIANGLE SIDES RELATION

Why

How does constraining a triangle to be a right angle constrain the lengths of its sides?

Result

Proposition 1. Let a and b be the lengths of the sides of a right triangle and c be the length of the hypotenuse. Then

$$a^2 + b^2 = c^2.$$

The result is called $Pythagorean\ theorem$ and the equation is called the $Pythagorean\ equation$.
