

## REAL LINEAR TRANSFORMATIONS

## Definition

A real linear transformation is a function  $f: \mathbb{R}^n \to \mathbb{R}^m$  satisfying

$$f(\alpha x + \beta y) = \alpha f(x) + \beta f(y).$$

Equivalently, f is (a) homogenous  $f(\alpha x) = \alpha f(x)$  and (b) additive f(x+y) = f(x) + f(y).
