

TRIANGULAR MATRICES

Why

TODO; arise often.

Definition

A matrix is upper triangular if all its entries below the diagonal are zero. A matrix is lower triangular if all its entries above the diagonal are zero. If, in addition, the diagonal is zero, then the matrix is strictly upper triangular and strictle lower triangular respectively.

A triangular matrix is either upper or lower triangular. A strictly triangular matrix is either strictly upper triangular or strictly lower triangular.

A unit triangular matrix is a triangular matrix (upper or lower) whose diagonal entries are one.

Other Terminology

Some authors call lower triangular matrices right triangular and upper triangular matrices right triangular.
