

NATURAL SUMS

Why

TODO We want to combine two groups.

Definition

Let m and n be two natural numbers. If we apply the successor function to m n times we obtain a number. If we apply the successor function to n m times we obtain a number. Indeed, we obtain the same number in both cases. We call this number the sum of m and n. We say we add m to n, or vice versa. We call this correspondence, between (m, n) and the sum, addition.

Notation

We denote the function addition by + and so denote the sum of the naturals m and n by m + n.
