## Definition

A complex rational function (or rational function, or fractional function) in  $\mathbf{C}$  is a function  $f: \mathbf{C} \to \mathbf{C}$  for which there exists polynomials  $p: \mathbf{C} \to \mathbf{C}$  and  $q: \mathbf{C} \to \mathbf{C}$  in  $\mathbf{C}$  so that

$$f(z) = \frac{p(z)}{q(z)},$$

for all  $z \in \mathbf{C}$ . In other words, a rational function is a "quotient" (see Complex Products) of two polynomials in  $\mathbf{C}$ .
