

PRODUCT METRICS

Why

Given n sets each with metrics, there is a standard way of turning the direct product of the sets into a metric space. In other words, defining a distance on the tuples of elements from the sets.

Motivating Result

Prop. 1. Let $(A_1, d_1), \ldots, (A_n, d_n)$ be metric spaces. Let A be $\prod_{i=1}^n A_i$ and let R be the set of real numbers. Define $d: A \times A \to R$ by

$$d(a,b) = \max\{d_1(a_1,b_1),\ldots,d_n(a_n,b_n)\}.$$

Then (A, d) is a metric space.

We call d the product metric.
