

ORTHOGONAL TRIANGULAR DECOMPOSITION

Why

Well, least squares, for instance.¹

Definition

An orthogonal triangular decomposition (or orthogonal triangular factorization) of a $A \in \mathbf{C}^{m \times n}$ with $m \geq n$ is an ordered pair of matrices (Q, R) where Q is orthogonal and R is upper triangular and

$$A = QR$$
.

This is universally known as a $\it QR$ factorization or $\it QR$ decomposition.
