

PRODUCT TOPOLOGIES

Definition

Given a family of topological spaces $\mathcal{F} = \{(X_{\alpha}, \mathcal{T}_{\alpha}\}_{\alpha \in I}, \text{ the product topology of } \mathcal{F} \text{ is the topology on } \prod_{\alpha \in I} X_{\alpha} \text{ generated by the set}$

$$\left\{ p_{\beta}^{-1}(U_{\beta}) \mid (\exists \beta)(U_{\beta} \in X_{\beta}) \right\}$$

where $p_{\beta}: \prod_{\alpha \in I} X_{\alpha} \to X_{\beta}$ is the β coordinate projection. Some authorities also use the terminology *Tychonoff topology*.
