

MATRIX DETERMINANTS

Why

1

Definition

Let $A \in \mathbf{R}^{d \times d}$. The determinant of A is

$$\sum_{\sigma \in S_n} \left(\operatorname{sgn}(\sigma) \prod_{i=1}^n a_{i,\sigma_i} \right)$$

We denote the determinant of A by $\det A$.

 $^{^1\}mathrm{Future}$ editions will include, and will probably take the genetic approach via volumes in three-dimensional space.
