

REAL AFFINE HULLS

Definition

The *affine hull* of a set in n-dimensional space is the intersection of the collection of affine sets which contain it.

Notation

We denote the affine hull of S by aff S.

Proposition 1. The affine hull of $S \subset \mathbb{R}^n$ consists of all vectors which can be expressed as

$$\lambda_1 x_1 + \lambda_2 x_2 \dots + \lambda_m x_m$$

such that $x_i \in S$ and $\sum_i \lambda_i = 1$.

Also, notice that if $A \subset \mathbf{R}^n$ is affine, then aff A = A.
