

MUTUAL INFORMATION

Definition

The mutual information of a joint distribution over two random variables is the entropy of the product of the marginal distributions relative to the joint distribution.

Notation

Let A and B be two non-empty sets. Let $p_{12}: A \times B \to \mathbf{R}$ be a distribution with marginal distributions $p_1: A \to \mathbf{R}$ and $p_2: B \to \mathbf{R}$. The mutual information of p is $d(p, p_1 p_2)$ where d denotes the relative entropy.
