

PROJECTIONS ON AFFINE SETS

Why

What is the projection of a vector onto an affine set?

Result

Proposition 1. Suppose $a \in \mathbb{R}^n$ and $U \in \mathbb{R}^{n \times k}$ with $U^{\top}U = I$. Define the affine set W(a, U) = a + range(U). Then

$$\operatorname{proj}_{W(a,U)}(x) = UU^{\top}x + (I - UU^{\top})a.$$

Proof. The minimizer of $J: \mathbf{R}^n \to \mathbf{R}$ defined by

$$J(z) = ||a + Uz - x|| = ||Uz - (x - a)||,$$

is $z^* = U^{\top}(x-a)$. So the projection of x onto W(a,U) is

$$a + Uz^{\star} = a + UU^{\top}(x - a) = UU^{\top}x + (I - UU^{\top})a.$$
