

## VECTOR SPACE ISOMORPHISMS

## Why

In some sense,  $\mathbb{R}^n$  is the only finite-dimensional vector space. In what sense?

## Definition

An *isomorphism* is an invertible linear transformation between two vector spaces. Two vector spaces are *isomorphic* if there exists and isomorphism between them.

## **Key Result**

**Prop. 1.** Two finite-dimensional vector spaces are isomorphic if and only if they have the same dimension.

Corollary 1. Two finite-dimensional vector spaces are isomorphic if and only if they have the same dimension.
