

ORDER AND ARITHMETIC

Why

How does arithmetic preserve order?

Results

The following are standard useful results.¹

Proposition 1. If m < n, then m + k < n + k for all k.

Proposition 2. If m < n and $k \neq 0$, then $m \cdot k < n \cdot k$.

Proposition 3 (Least Element). If E is a nonempty set of natural numbers, there exists $k \in E$ such that $k \leq m$ for all $m \in E$.

Proposition 4 (Greatest Element). If E is a nonempty set of natural numbers, there exists $k \in E$ such that $m \le k$ for all $m \in E$.

¹The accounts of which will appear in future editions.
