

Homomorphisms

Why

We name a function which preserves algebraic structure.

Definition

A group homomorphism between two groups (A,+) and $(B,\tilde{+})$ is a bijection $f:A\to B$ such that $f(1_A)=1_B$ for $1_A\in A$ and $1_B\in B$ and $f(a+a')=f(a)\tilde{+}f(a')$ for all $a,a'\in A$. We define a ring homomorphism and field homomorphism similarly.
