

## RATIONAL REAL HOMOMORPHISM

## Why

Do the rational numbers correspond (in the sense of Homomorphisms) to elements of the reals.

## Main result

Indeed, roughly speaking the rationals correspond to elements of the reals which are bounded above by that rational. Denote by  $\tilde{\mathbf{R}}$  the set  $\{q \in \mathbf{R} \mid \exists s \in \mathbf{Q}, q = \{t \in \mathbf{Q} \mid t < s\}\}.$ 

**Proposition 1.** The fields  $(\tilde{\mathbf{R}}, +_{\mathbf{R}} | \tilde{\mathbf{R}}, \cdot_{\mathbf{R}} | \tilde{\mathbf{R}})$  and  $(Q, +_{\mathbf{Q}}, \cdot_{Q})$  are homomorphic.<sup>1</sup>

*Proof.* The function is 
$$f : \mathbf{Q} \to \mathbf{R}$$
 with  $f(q) = \{ (r \in \mathbf{Q} \mid r < q \}$ 

<sup>&</sup>lt;sup>1</sup>Indeed, more is true and will be included in future editions. There is an *order* perserving field homomorphism.
