

## LINEAR FUNCTIONS

## Definition

A function  $f: \mathbf{R}^n \to \mathbf{R}$  is linear if

1. 
$$f(x+y) = f(x) + f(y)$$
 for all  $x, y \in \mathbb{R}^n$  and

2. 
$$f(\alpha x) = \alpha f(x)$$
 for all  $x \in \mathbb{R}^n$  and  $\alpha \in \mathbb{R}$ .

There are simple consequences to these conditions. For example, f(0) = 0.
