

## Sentences

## 1 Why

We want to say things about objects and sets of objects.

## 2 Discussion

An assertion is a sequence of symbols which is assumed to be true.

Let a be an object. Let A be a set. A membership assertion is  $a \in A$ . Notice that  $\in$  is not symmetric.  $a \in A$  does not assert the same meaning as  $A \in a$ .

Let b be an object. An *identity assertion* is a = b. Notice that a = b asserts the same as b = a.

A primitive sentence is a belonging assertion or an equality assertion. The symbolism used includes three pieces: the names of the two objects and the symbols  $\in$  or =.

A logical form is one of several structures:

- 1. and
- 2. or (in the sense of "— or or both")

- 3. not
- 4. implies (in the sense of "if —, then —"
- 5. if and only if
- 6. for some
- 7. for all

This list is redundant.

A sentence primitive sentence or a logical form with a primitive sentence or a logical form with sentences.
