

RATIONAL ARITHMETIC

Why

What are addition and multiplication for rationals? What are the identity elements?

Definition

We call the operation of forming rationals sums *rational addition*. We call the operation of forming rational products *rational multiplication*.

Results

It is easy to see the following.¹

Proposition 1. The additive identity for Q is $[(0_Z, 1_Z)]$.

Proposition 2. The multiplicative identity for $\boldsymbol{\mathsf{Z}}$ is $[(1_{\boldsymbol{\mathsf{Z}}},1_{\boldsymbol{\mathsf{Z}}})].$

Notation

We denote the additive identity of \mathbf{Q} by $0_{\mathbf{Q}}$ and the multiplicative identity by $1_{\mathbf{Q}}$. We denote the set $\{q \in \mathbf{Q} \mid q \geq 0_Q\}$ by \mathbf{Q}_+ .

Distributive

Proposition 3. For rationals $x, y, z \in \mathbb{Z}$, $x \cdot (y+z) = x \cdot y + x \cdot z$.
