

SECOND DERIVATIVES

Definition

Let $A \subset \mathbf{R}$ open. Let $f: A \to \mathbf{R}$ be differentiable with derivative $f': \mathbf{R} \to \mathbf{R}$. We call f twice differentiable (or two times differentiable) if its derivative f' is differentiable. In this case, we call the derivative of f' the second derivative of f.

Notation

Let $A \subset R$. The second derivative of the twice-differentiable function $f:A \to \mathbf{R}$ is sometimes denoted $f''(x):A \to \mathbf{R}$
