

Generated Sigma Algebra

1 Why

A simple way to obtain a sigma algebra, is to ask it to obtain some sets, and then to ask it to contain all the sets it needs to fulfill the properties.

2 Definition

The generated sigma algebra for a set of subsets is the smallest sigma algebra containing the set of subsets. We must prove the existence and uniqueness of this sigma algebra.

Proposition 1. The intersection of a non-empty set of sigma algebras on the same base set is a sigma algebra.

Proof. Let $\{(A, \mathcal{A}_{\alpha}\}_{{\alpha} \in I} \text{ a family of sigma algebras on the same base set. Define <math>\mathcal{A}$ as $\cap_{{\alpha} \in I} \mathcal{A}_{\alpha}$.

- 1. For all $\alpha \in I$, $A \in \mathcal{A}_{\alpha}$, thus $A \in \mathcal{A}$; condition (a).
- 2. For all $B \in \mathcal{A}$, for all $\alpha \in I$, $B \in \mathcal{A}_{\alpha}$. Thus, for all $\alpha \in I$, $C_A(B) \in \mathcal{A}_{\alpha}$. And so $C_A(B) \in \mathcal{A}$; condition (b).

3. For all sequences $\{B_n\} \subset \mathcal{A}$, $\{B_n\} \subset \mathcal{A}_{\alpha}$ for all α . Thus $\cup_n B_n \in \mathcal{A}_{\alpha}$ for all α and so $\cup_n B_n \in \mathcal{A}$; condition (c).

On the other hand, the union of a set of sigma algebras can fail to be a sigma algebra.

Proposition 2. If A is a set and $A \subset 2^A$, then there is a unique a smallest sigma algebra containing A.

Proof. We know of one sigma algebra containing \mathcal{A} : the power set of A. Thus, the set of sigma algebras containing \mathcal{A} is not empty. Proposition ?? implies the intersection of all such sigma algebras (containing \mathcal{A}) is a sigma algebra. The intersection contains \mathcal{A} , and is contained in all other sigma algebras with this property, so is a smallest sigma algebra containing \mathcal{A} . If \mathcal{B}, \mathcal{C} were two smallest sigma algebras, then $\mathcal{B} \subset \mathcal{C}$ and $\mathcal{C} \subset \mathcal{B}$, but then $\mathcal{B} = \mathcal{C}$; thus the smallest sigma algebra is unique. \square

3 Notation

Let A be a set and $\mathcal{A} \subset 2^A$. We denote the sigma algebra generated by \mathcal{A} by $\sigma(\mathcal{A})$.
