

## DISTRIBUTION SELECTION

## Why

We want to summarize a dataset by a probability distribution.

## Overview

We have a set of outcomes A. We have a dataset  $(a^1, \ldots, a^n)$  in A. We want to define a correspondence between the dataset and probability distributions over the set of outcomes A.

We call correspondences principles of distribution selection.

Notice that we do not want a distribution on the record sequences. In other words, we want a distribution on A not a distribution on  $A^n$ .
