

## REAL VECTOR PROJECTIONS

## **Definition**

The projection of  $x \in \mathbb{R}^n$  onto the subset  $S \subset \mathbb{R}^n$  is the point in S closest to x.

## Notation

We sometimes the projection of x onto S by  $\text{proj}_S(x)$ . We have

$$\operatorname{proj}_S(x) = \operatorname*{argmin}_{z \in S} \|x - z\|$$
