

## QUASICONCAVE FUNCTIONS

## Why

## Definition

A function is quasiconcave if its result on any point of a line segment is larger than its result on either of the endpoints.

## **ß**Notation

A function  $f: \mathbb{R}^n \to \mathbb{R}$  is quasiconcave if  $f(v) \ge \min\{f(w), f(z)\}$  for all v on the line segment [w, z].
